

REACH

Declaration on Regulation (EG) No 1907/2006 concerning the registration, evaluation, authorisation and restriction of chemicals (REACH)

Dear Sir or Madam,

As a manufacturer of sensor technology, eddylab GmbH is classified according to REACH as a „downstream user“. This means we produce exclusively non-chemical products (products in accordance with Article 3 definitions).

Under the normal conditions of use for the devices and/or foreseeable environmental or operational conditions, no substances are released from our products. Accordingly, eddylab GmbH is subject neither to the registration requirement, nor to the obligation to prepare safety data sheets.

eddylab GmbH fully complies with the obligations of downstream users and shall inform, pursuant to Article 33, if the substances used by us (with a content greater than 0.1%) are classified as SVHC (Substances of Very High Concern) by the European Chemicals Agency (ECHA).

In the interest of high product safety, we closely monitor implementation of REACH by our suppliers. To our current knowledge and based on the information provided by our suppliers, none of our products include SVHCs as defined by the Candidate List (EC) No 1907/2006 (REACH) in a concentration of over 0.1 percent by weight.
